Week-13

Question 1:

Question 1
Correct
Flag question

Given an array of numbers, find the index of the smallest array element (the pivot), for which the sums of all elements to the left and to the right are equal. The array may not be reordered.

Example

arr=[1,2,3,4,6]

- the sum of the first three elements, 1+2+3=6. The value of the last element is 6.
- \cdot Using zero based indexing, arr[3]=4 is the pivot between the two subarrays.
- · The index of the pivot is 3.

Function Description

Complete the function balancedSum in the editor below.

balancedSum has the following parameter(s):

int arr[n]: an array of integers

Returns

int: an integer representing the index of the pivot

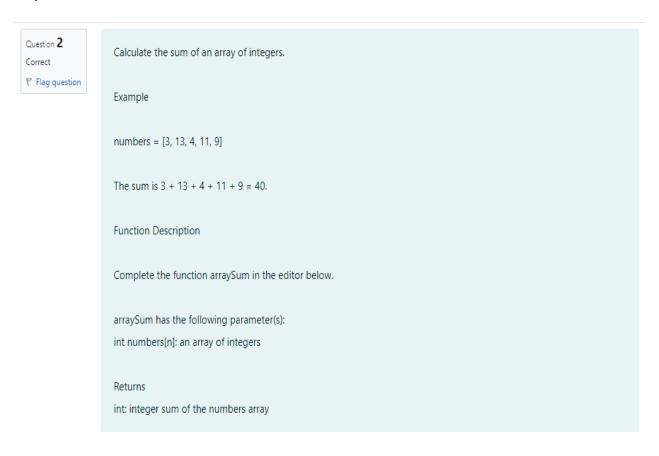

Source code:

```
int balancedSum(int arr_count, int* arr)
          long leftSum=0,rightSum=0;
for(int i=0;i<arr_count;i++)</pre>
               rightSum+=arr[i];
for(int i=0;i<arr_count;i++)
               rightSum-=arr[i];
if(leftSum==rightSum)
{
                  return i;
                leftSum+=arr[i];
           return 1;
     }
int main1()
{
          int n;
scanf("%d",&n);
          int arr[n];
for(int i=0;i<n;i++)
{</pre>
               scanf("%d",&arr[i]);
          int pivotIndex=balancedSum(n,arr);
if(pivotIndex!=-1)
              printf("pivot index: %d\n",pivotIndex);
               printf("No pivot index found\n");
           }
return 0;
```

Result:

	Test	Expected	GOL	
~	<pre>int arr[] = {1,2,3,3}; printf("%d", balancedSum(4, arr))</pre>	2	2	~
	ests! ✓			

Question 2:

Source code and Result:

```
* Complete the 'arraySum' function below.
 2
 3
     \ensuremath{^{*}} The function is expected to return an <code>INTEGER.</code>
 4
     ^{st} The function accepts <code>INTEGER_ARRAY</code> numbers as parameter.
 5
8
    int arraySum(int numbers_count, int *numbers)
9 -
10
         int sum=0;
11
         for(int i=0;i<numbers_count;i++)</pre>
12 •
13
             sum=sum+numbers[i]:
14
         return sum;
15
16
    int main1()
17
18 🔻 {
         int numbers[]={3,13,4,11,9};
19
20
         int numbers_count=sizeof(numbers)/sizeof(numbers[0]);
21
         int result=arraySum(numbers_count,numbers);
22
         printf("The sum is: %d\n",result);
23
         return 0;
24 }
```

~
int arr printf(

Question 3:

Question **3**Correct

Flag question

Given an array of n integers, rearrange them so that the sum of the absolute differences of all adjacent elements is minimized. Then, compute the sum of those absolute differences. Example n = 5 arr = [1, 3, 3, 2, 4] If the list is rearranged as arr' = [1, 2, 3, 3, 4], the absolute differences are |1 - 2| = 1, |2 - 3| = 1, |3 - 3| = 0, |3 - 4| = 1. The sum of those differences is 1 + 1 + 0 + 1 = 3. Function Description Complete the function minDiff in the editor below. minDiff has the following parameter: arr: an integer array Returns: int: the sum of the absolute differences of adjacent elements Constraints $2 \le n \le 105$ 0 \le arr $[i] \le 109$, where $0 \le i < n$ Input Format For Custom Testing The first line of input contains an integer, n, the size of arr. Each of the following n lines contains an integer that describes arr[i] (where $0 \le i < n$). Sample Case 0 Sample Input For Custom Testing STDIN Function ----- $5 \to arr[1]$ size $n = 5 \to arr[1] = [5, 1, 3, 7, 3]$ If arr is rearranged as arr' = [1, 3, 3, 5, 7], the differences are minimized. The final answer is |1 - 3| + |3 - 3| + |3 - 5| + |5 - 7| = 6. Sample Case 1 Sample Input For Custom Testing STDIN Function ----- $2 \to arr[1]$ size $1 \to 100$ arr $[1 \to 100]$ arr $[1 \to 10$

Source code and Result:

```
#include<stdio.h>
 8
     #include<stdlib.h>
    int compare(const void* a,const void* b)
9
10 + {
11
        return (*(int*)a- *(int*)b);
12 |}
13 |int minDiff(int arr_count, int* arr)
14 v {
        int sum=0;
15
16
        qsort(arr,arr_count,sizeof(int),compare);
17
        for(int i=1;i<arr_count;i++)</pre>
18 🔻
19
            sum=sum+abs(arr[i]-arr[i-1]);
20
21
        return sum;
22 }
23 int main1()
24 v
25
        int arr[]={1,3,7,3,5};
        int arr_count=sizeof(arr)/sizeof(arr[0]);
26
27
        int result=minDiff(arr_count,arr);
        printf("The minimized sum of absolute difference is: %d\n",result);
28
29
        return 0;
30 }
```

	Test	Expected	Got	
~	<pre>int arr[] = {5, 1, 3, 7, 3}; printf("%d", minDiff(5, arr))</pre>	6	6	~
	<pre>int arr[] = {5, 1, 3, 7, 3}; printf("%d", minDiff(5, arr)) d all tests! </pre>	6	6	~
